

Presented by Sahil Chawla

Data Analytics with Python

Week 3

What have you learnt so far?

+++

- Variables and Data Types
- Input/Output operations
- Conditional Statements
- Loops
- Functions
- Data Structures (Lists, Dictionaries)

What are you going to learn?

+++

- What is Data Analysis?
- How do we get data?
- What do we do with that data?
- Using pandas to make that data useable

pandas

Data Analysis

Process of inspecting, cleaning, transforming, and modeling data. To discover useful information, draw conclusions, and support decision-making.

Power BI

How Do We Get Data?

+++

What Do We Do with That Data?

+++

1. Data Cleaning & Preprocessing
2. Data Analysis
3. Predictions
4. Reporting & Visualizations

Introduction to pandas

- Python library
- Helpful in
 - Importing data
 - Organizing data
 - Processing data
- Widely used in finance, marketing, research, and machine learning for data cleaning, statistical analysis, and building predictive models.
- Easy Data Handling: Offers intuitive methods to clean, filter, and transform data.
- Data Analysis & Manipulation: Supports operations like grouping, merging, and aggregating data.
